terinopace@gmail.com | Denver, CO

Staff iOS Engineer

Staff iOS engineer with over a decade of experience building and scaling mobile applications across greenfield, legacy, and high-traffic environments. Expert in Swift, UIKit, SwiftUI, and modern architectural patterns (MVVM+R, modularization), with deep expertise in XCTest, UI testing, snapshot testing, and Xcode tooling (XcodeGen, CI/CD pipelines, Fastlane). Known for improving developer velocity through clean architecture, automated testing strategies, and performance optimization using Instruments and system-level debugging tools. Trusted technical leader skilled in mentoring engineers, strengthening engineering culture, and driving high-quality mobile execution from design through release.

TECHNICAL SKILLS

- ***Languages & Frameworks:*** *Swift, Objective-C, Kotlin, UIKit, SwiftUI, Typescript, Combine, Swift Concurrency*
- ***Architecture & Patterns:*** *MVVM+R, Modular Architecture, Dependency Injection, Feature Flagging, Mobile System Design*
- ***Testing & Quality Engineering:*** *XCTest, Swift Testing, Snapshot testing, TDD, Mocking*
- ***Build &Tooling:*** *XcodeGen, Fastlane, CI/CD, Instruments, Xcode Debugging Tools*
- ***APIs & Backend:*** *REST, GraphQL, Spring, RoR, Sinatra*
- ***Databases:*** *PostgreSQL, MySQL, Core Data, SwiftData*

C a r e e r E x p e r i e n c e

Staff iOS Engineer *-- **Gusto |** June 2026 – Present*

Owned testing infrastructure, the design-system rollout and new features across Gusto's modular iOS app.

- *Set the iOS org's strategy for Swift Testing standards and led migration from XCTest across 25+ modules. Local tests ran up to 22% faster, and CI guards now block regressions back to old patterns.*
- *Built improve-testability, an agentic skill that finds flaky test and fixes them one at a time. Ranks files by test-health red flags and coverage data, injects scheduling seams, rewrites each test as deterministic Swift Testing, verifies it with a build, and opens a ticket/PR.*
- *Built Understudy, a local mock backend shared by iOS/Android. Serves GraphQL/REST fixtures with switchable personas, injectable failures, and undoable stateful writes, so mobile engineers can build against an agreed upon API before the BE ships it.*
- *Built career-copilot, an org-wide plugin that turns an employee's activity into a recurring brag doc with entries mapped to their role's performance expectations.*
- *Drove iOS side of company-wide brand refresh: migrated 10+ feature modules to shared component library and added SwiftLint rules that enforce design tokens.*
- *Shipped customer facing features, including iPhone Duo + iPad support, a new multi-bank account management experience, California SB 553 compliance, and a redesigned employer home screen.*

Staff iOS Engineer *-- **Fanatics |** October 2022 – August 2025*

Led greenfield development and release of two iOS apps (FanApp and Sportsbook) while modernizing mobile architecture, scaling, engineering processes and improving platform reliability.

- *Delivered a full greenfield rebuild of decade-old iOS App, boosting monthly revenue to **$1M** and achieving a **4.8+** AppStore rating.*
- *Engineered a high-frequency WebSocket consumer capable of processing **100s of market updates per second at 60fps**, while minimizing battery and CPU overhead.*
- *Established iOS coding standards with MVVM+R architecture (UIKit/SwiftUI), enabling parallel development for **10+ engineers**, reducing onboarding time, and improving code consistency.*

Michael Pace

terinopace@gmail.com | Denver, CO

- *Enabled dozens of engineers to onboard and contribute within two months through clear system documentation and architectural simplification of a complex Kotlin Multiplatform codebase.*
- *Increased automated test coverage across iOS, Android, and Kotlin Multiplatform projects, significantly reducing regression rates and manual QA efforts.*

***Senior iOS Engineer* -- Angi |** *January 2022 – September 2022* **(COVID-19 RIF)**

Modernized legacy iOS apps and introduced testing and automation strategies that stabilized the platform and accelerated delivery.

- *Converted manual QA scenarios into automated regression tests (Ruby/Sinatra and UI testing), saving ~30 QA hours per month and hundreds of developer hours per quarter.*
- *Reduced regressions by 40% and cut hotfixes by enforcing mandatory tests on all new and modified code.*
- *Integrated automation into GitHub workflows, streamlining releases and developer feedback loops.*
- *Refactored the Ads & Leads iOS apps, improving testability and reducing crash rates by 25%.*
- *Proposed and implemented a modularization strategy for legacy code.*
- *Drove cross-team discussions on technical-debt management and prioritization.*
- *Shaped the iOS hiring pipeline through interviewing, helping build a cohesive, higher-quality team.*

***Senior iOS Engineer* -- Flowhub |** *December 2020 – October 2021* **(COVID-19 RIF)**

Led the architecture and delivery of a greenfield cross-platform payments app using React Native and TypeScript.

- *Served as Tech Lead for a greenfield payments app, defining architecture, unblocking engineers, and guiding product through prototype to production.*
- *Modernized a legacy Swift codebase to improve modularity, increase testability, and enable faster iteration across multiple teams.*
- *Implemented CI/CD pipelines that improved build reliability, reduce manual deployment efforts, and established TDD and agile workflows across the team.*
- *Mentored peers in XP practices (pair programming, iterative development, CI), strengthening team collaboration and code quality.*

***Staff iOS Engineer* -- Ibotta** *| January 2020 – March 2020 (COVID-19 RIF)*

Improved the reliability of cash-back redemption features on the Redemption UX squad during a legacy system transition.

- *Designed a lightweight modernization strategy for high-risk legacy components, enabling safer incremental refactoring and reducing regression risk.*

***Senior Software Engineer* -- Pivotal Labs** *| May 2015 – November 2019*

Drove agile and XP transformations for enterprise, government (including the F-35 program) and startup clients, improving engineering practices and delivery velocity.

- *Led teams in adopting TDD, CI/CD and pair programming, improving code quality and accelerating delivery.*
- *Streamlined iOS release workflows with Fastlane, reducing manual deployment effort and errors.*
- *Mentored engineers at all levels, strengthening engineering culture and iterative delivery habits.*

Education

Bachelor of Software Engineering, Magna Cum Laude Auburn University – Auburn, AL

Languages: English, Spanish
