Senior iOS Engineer

Senior iOS engineer with over a decade of experience building and scaling mobile applications across greenfield, legacy, and high-traffic environments. Expert in Swift, UIKit, SwiftUI, and modern architectural patterns (MVVM+R, modularization), with deep expertise in XCTest, UI testing, snapshot testing, and Xcode tooling (XcodeGen, CI/CD pipelines, Fastlane). Known for improving developer velocity through clean architecture, automated testing strategies, and performance optimization using Instruments and system-level debugging tools. Trusted technical leader skilled in mentoring engineers, strengthening engineering culture, and driving high-quality mobile execution from design through release.

TECHNICAL SKILLS

- ***Languages & Frameworks:*** *Swift, Objective-C, Kotlin, UIKit, SwiftUI, Combine, Swift Concurrency*
- ***Architecture & Patterns:*** *MVVM+R, Modular Architecture, DI, Feature Flagging, Mobile System Design*
- ***Testing & Quality Engineering:*** *XCTest, Swift Testing, TDD, Mocking*
- ***Build &Tooling:*** *XcodeGen, Fastlane, CI/CD, Instruments, Xcode Debugging Tools*
- ***APIs & Cross-Platform Experience:*** *REST, GraphQL, Spring, RoR, TypeScript, Sinatra*
- ***Databases:*** *PostgreSQL, MySQL, Core Data, SwiftData*

C a r e e r E x p e r i e n c e

Staff iOS Engineer -- Fanatics | *October 2022 – August 2025*

Led greenfield development and release of two iOS apps (FanApp and Sportsbook) while modernizing mobile architecture, scaling, engineering processes and improving platform reliability.

Customer-Facing Delivery & Architecture:

- *Delivered a full greenfield rebuild of decade-old iOS App, boosting monthly revenue to **$1M** and achieving a **4.8+** AppStore rating.*
- *Implemented a data-driven, schema-governed API contract that streamlined page feed rendering and reduced future development time by t**housands of engineering hours**.*
- *Engineered a high-frequency WebSocket consumer capable of processing **100s of market updates per second at 60fps**, while minimizing battery and CPU overhead.*

Code Quality & Engineering Efficiency:

- *Established iOS coding standards with MVVM+R architecture (UIKit/SwiftUI), enabling parallel development for **10+ engineers**, reducing onboarding time, and improving code consistency.*
- *Improved developer velocity by simplifying module boundaries, removing unnecessary dependencies, and enforcing a scalable architectural pattern across teams.*
- *Built a resilient networking layer with retry logic, offline queueing, and exponential backoff for fault-tolerant real-time features.*

Automation & Platform Reliability:

- *Increased automated test coverage across iOS, Android, and Kotlin Multiplatform projects, significantly reducing regression rates and manual QA efforts.*
- *Led rollout of automated QA pipelines, accelerating release cadence and improving runtime stability.*

Organizational Leadership:

- *Enabled dozens of engineers to onboard and contribute within two months through clear system documentation and architectural simplification of a complex Kotlin Multiplatform codebase.*
- *Drove mobile hiring processes, refining interview loops, and building a high-caliber iOS engineering pipeline.*

terinopace@gmail.com | Denver, CO

***Senior iOS Engineer* -- Angi |** *January 2022 – September 2022* **(COVID-19 RIF)**

Modernized legacy iOS apps and introduced testing and automation strategies that stabilized the platform and accelerated delivery.

Platform Stabilization & Developer Velocity:

- *Saved developers **hundreds of hours per quarter** by converting manual QA scenarios into automated tests using Ruby, improving release quality, and reducing regressions.*
- *Reduced regressions by **40%** by enforcing mandatory tests on all new and modified code, eliminating hot fixes.*
- *Integrated automation into GitHub workflows, streamlining release processes and developer feedback loops.*

Legacy Modernization & Product Stability:

- *Refactored Ads & Leads iOS apps, improving testability and reducing crash rates by **25%.***
- *Proposed and implemented strategies for modularizing legacy code.*

Testing & QA Automation:

- *Developed automated regression tests using Sinatra and UI testing, saving **~30 QA hours/month**.*

Technical Governance:

- *Drove cross-team discussions around technical debt management and prioritization.*
- *Shaped iOS hiring pipeline by participating in interviews and helping build a cohesive, higher-quality engineering team*

Senior iOS Engineer* -- Flowhub | –December 2020 – October 2021* **(COVID-19 RIF)**

Led the architecture and delivery of a greenfield cross-platform payments app using React Native and TypeScript.

Cross-Platform Product Development:

- *Served as Tech Lead for a greenfield payments app, defining architecture, unblocking engineers, and guiding product through prototype to production.*

iOS Refactoring & Platform Improvements:

- *Modernized a legacy Swift codebase to improve modularity, increase testability, and enable faster iteration across multiple teams.*

CI/CD & Development Practices:

- *Implemented CI/CD pipelines that improved build reliability, reduce manual deployment efforts, and established TDD and agile workflows across the team.*
- *Mentored peers in XP practices (pair programming, iterative development, CI), strengthening team collaboration and code quality.*

***Staff iOS Engineer* -- Ibotta |** *January 2020 – March 2020* **(COVID-19 RIF)**

Contributed to Redemption UX squad, improving the reliability of cash back redemption features during a legacy system transition.

- *Designed a lightweight modernization strategy for a high-risk legacy components, enabling safer increment refactoring and reducing regression risk.*

***Senior Software Engineer* -- Pivotal Labs |** *May 2015 – November 2019*

Drove agile and XP transformations for enterprise, government (including F-35 program), and startup clients, improving engineering practices and delivery velocity.

- *Led teams in adopting, TDD, CI/CD, and paired programming to improve code quality and accelerated delivery.*
- *Streamlined iOS release workflows using Fastlane, reducing manual deployment effort and errors.*
- *Mentored engineers across levels, strengthening engineering culture and iterative delivery habits.*

Education

Bachelor of Software Engineering, Magna Cum Laude Auburn University – Auburn, AL

Languages: English, Spanish
